sccct-package $Suffice$ $ble$	ent Condition Conjunction Algorithm Based on Contingency Ta-
-------------------------------	--

# **Description**

Pkgsccct is a package to perform the Sufficient Condition Conjunction Algorithm Based on Contingency Table.

# Author(s)

#### Author:

Wei Xu

#### **Maintainer**:

Wei Xu <eric.wxu@hotmail.com

bocorrection	Bonferroni correction for the Chi-squared test.	

# **Description**

This function corrects Pearson's Chi-squared test by bonferroni correction.

# Usage

bocorrection(screencom, pvaluevec, numofsnps)

# **Arguments**

screencom the snp combination.

pvaluevec the p-value of Pearson's Chi-squared test.

numofsnps the number of SNPs.

#### Value

A numeric value of pvalue in the pearsons chisquared by bonferroni correction..

# References

Benjamini, Y. and D. Yekutieli (2001). The control of the false discovery rate in multiple testing under dependency. The Annals of Statistics. 29: 1165-1188.

chi2test 3

#### **Examples**

chi2test

Chisquaretest for the Pattern in the Source Data

### **Description**

This function tests whether the pattern is related to the depend variable in the source dataset by Pearson's Chi-squared test.

### Usage

```
chi2test(factor,snps,class)
```

# **Arguments**

factor the snp combination.

snps the snps matrix,0 denotes the missing data,1 denotes homozygous wild-type al-

leles, 2 denotes homozygous wild-type alleles,3 denotes homozygous mutant

alleles.

class the disease vector,1 denotes case and 2 denotes control.

#### Value

A numeric value of pvalue in the Pearsons Chi-squared test.

# References

Haviland MG. Yates's correction for continuity and the analysis of 2 x 2 contingency tables. Stat Med. 1990 Apr;9(4):363-7; discussion 369-83. doi: 10.1002/sim.4780090403. PMID: 2362976.

4 generatecombineall

# **Examples**

generatecombineall

Generate all the combinations less than or equal to the max order

#### **Description**

This function generates all the combinations less than or equal to the max order.

### Usage

```
generatecombineall(conditionalvarvec, maxorder)
```

# Arguments

```
conditional varvec
the vector of the conditional variables.

maxorder the maximum order specified.
```

#### Value

A list of the combinations.

#### References

Lockwood, Elise, Gibson, Bryan R.. Combinatorial tasks and outcome listing: Examining productive listing among undergraduate students [J]. Educational Studies in Mathematics. 2016, 91(2).

```
library(purrr)
library(plyr)
library(stringr)
conditionalvarvec<-c(1:8)
maxorder=3
allcombinations<-generatecombineall(conditionalvarvec, maxorder)</pre>
```

samplescount 5

samplescount	Generate a contingency table for the Source Data	

# **Description**

This function generate a contingency table for the source data.

# Usage

```
samplescount(snps,factor,class)
```

# **Arguments**

snps	the snps matrix,0 denotes the	e missing data,1 denotes	homozygous wild-type al-

leles, 2 denotes homozygous wild-type alleles,3 denotes homozygous mutant

alleles.

factor the snp combination.

class the disease vector, 1 denotes case and 2 denotes control.

# Value

A contingency table for the source data as matrix.

# References

6 sccct

sccct Sufficient Condition Conjunction Algorithm Based on Contingency Table

#### **Description**

This function completes the calculation of sccct analysis.

### Usage

sccct(sccsamples, mvsccsamples, maxnum of conditions, consistency threshold, coverage threshold)

#### **Arguments**

```
sccsamples Dataset.

mvsccsamples Dataset with multivalue coding.

maxnumofconditions

Maximum order of combinations.

consistencythreshold

Threadhold of consistency.

coveragethreshold

Threadhold of coverage.
```

#### Value

The sccct solution.

# References

Baumgartner, Michael.(2009). Inferring Causal Complexity. Sociological Methods & Research. 38. 10.1177/0049124109339369.

```
#library(cna)
library(purrr)
library(plyr)
library(stringr)
consistencythreshold=0;
coveragethreshold=0;
maxnumofconditions=2;
sccsamples<-data.frame(</pre>
mvsccsamples<-data.frame(</pre>
```

sccctonepattern 7

sccctonepattern Sufficient Condition Conjunction Algorithm Based on Contingency Table by One Pattern

# **Description**

This function completes the calculation of secetonepattern analysis.

#### Usage

sccctonepattern(pattern, sccsamples, mvsccsamples)

#### **Arguments**

pattern Pattern.
sccsamples Dataset.

mvsccsamples Dataset with multivalue coding.

#### Value

The sectonepattern solution.
